## **MiniMitter Telemetry System**

**Used in assays of:**

**Meal Pattern Analysis**

**Heart Rate**

**General Locomotion**

**Body Temperature**

The RBF has eight biotelemetry systems available for mic. These systems allow users to remotely measure rodent feeding and drinking, heart rate, body temperature, and general locomotor activity. Uninterrupted, lifetime studies are possible and the novel feature of this system is the ability to reliably and accurately measure physiologic data from freely moving subjects in their home environment.
